Exercises – Function Pointers

You are going to extend the calculator example given in the lecture notes. Enter the code as provided and demonstrate that it works

Add code so the user can input numbers and select the operator to apply. The result should be displayed on the console. For example if the user enters

> 10<Enter>

> 10<Enter>

> +<Enter>

> The console should display 20.

Add functions for multiply and divide
